

In–Course Assessment Examination-1
CSC 3213 - Computer Architecture (Practical)
Applied Mathematics and Computing
Second Semester – Academic Year 2020/2021
Department of Physical Science
University of Vavuniya

Time Allowed: One hour

16 May 2025

Instructions:

- *Create a directory on the desktop with your registration number, take screenshots of the outputs, and save them as Word files in your directory.*
- *In each program file, the first line must be a comment with your registration number.*

1. Write an assembly language program to read two integers from the user, and do the arithmetic operations as follows in the output

The output should be as follows:

Enter the first number: 7
Enter a second number: 2
Sum: 9
Difference: 5
Product: 14
Quotient: 03
Remainder: 01

(50 marks)

2. Write an Assembly language program that reads a three-digit number from the user and determines whether the number is a palindrome.

The output should be as follows:

Enter a three-digit number: 121
The number is a palindrome.

Enter a three-digit number: 123
The number is not a palindrome.

(50 marks)
